Verichem reference materials for creatinine

assays

written by CAP TODAY
March 29, 2024

March 2024—The Matrix Plus chemistry reference kit and standalone, ultra-high Matrix Plus level F for the calibration verification testing of creatinine assays by enzymatic and colorimetric methods are available from Verichem Laboratories. The ready-to-use reference materials offer constant protein content and pH across all concentration levels. The five-level Matrix Plus kit and level F feature a creatinine range from 0.2 mg/dL to 30.0 mg/dL and are intended to be treated as patient specimens. Shelf life and open-vial stability are 21 months from the manufacturing date.

Bio-Rad publishes third workbook in QC series

written by CAP TODAY
March 29, 2024

March 2024—Bio-Rad Laboratories has published the third workbook in a P.A.C.E.-approved series designed to provide lab professionals with the training and education needed to maintain reliable test results. “Quality Control Process Optimization with Cost of Quality Application” focuses on a practical approach of cost of quality to the laboratory workflow process of quality control. After using the workbook, laboratorians will be able to construct a basis worksheet to calculate the failure costs of a selected failed laboratory process.
