

# Lost in translation: when clinical systems reformat lab reports

Karen Wagner

Imagine sending a long, detailed letter to a friend and asking that person to forward it to some acquaintances. But the friend decides to rewrite the letter—changing the wording while trying to retain your message—before forwarding it. If you're lucky, your original message will not be lost in the editing process. If you're not so lucky...well, you get the picture.

A similar scenario plays out when clinical information systems reformat

pathology reports sent from anatomic pathology and other lab systems. The good news is that many information systems vendors have been working to resolve the problem—sometimes on a case-by-case basis.

Reformatted laboratory reports have been an issue for a long time, says Raymond Aller, MD, director of the automated disease surveillance section and senior physician, Los Angeles County Department of Public Health, and contributing editor to the CAP TODAY "Newsbytes" column. "Frequently, when a table is sent across an HL7 data stream to the hospital information system, it's garbled. You can't read it. Or, you think you can read it, but you're actually missing important information," he explains. "There's a lot of different ways electronic medical records can garble data."

It may not be surprising that complex images and graphs do not transmit well, but text formatting styles can also pose a problem, Dr. Aller says. Lab reports typically are complex, he adds, "and the business of the electronic medical record vendor is to try to model the overall medical record—progress notes and medication records. They haven't been focusing their attention on understanding all of the complexities of the various kinds of lab results."

While clinical information systems often cannot display all of the formatting and images sent from a lab system, the text itself is usually intact, says Joseph Stabile, product marketing manager for Horizon Laboratory Solutions at McKesson Provider Technologies. But, he clarifies, "if the legacy systems have field length restrictions, it is possible that even some of the plain text data may not display."

Common modifications made by clinical systems are altering the order of result components, such as the frozen diagnosis or supplemental diagnosis, and changing the formatting of boldfaced and italicized text, says Michael Mihalik, vice president of sales for Pathview Systems. And some older systems, he says, "cannot accommodate tabs and other types of formatting."

Although none of the anatomic pathology vendors interviewed for this article were aware of clinical system modifications leading to misdiagnoses, they acknowledged that transmission problems can be frustrating for clinicians. "We are not aware of any misdiagnoses, but it's quite common for us to hear of extended phone calls and faxed transmissions to clear mixups," Mihalik says.

So how do information systems companies prevent such issues?

Dr. Aller suggests that the best option is for lab systems to report to the

EMR using a dual feed, which means using HL7 fields and, for now, the PDF, or portable document format. The HL7 format, in which each piece of raw data is put in a slot, or field, works well "if you want to do data mining and trending," says Dr. Aller. "But you don't stop there," he continues. "I think you also need to be sending to the EMR a formatted report in a way that the EMR can then paint this up on the screen and say, 'This is the report as it was prepared by the lab.'" This is where the PDF comes in. "The PDF is good because it's formatted—it presents the data in exactly the way the lab intended it to be presented."

Such is PathLogix's process, which "avoids reformatting problems by offering full reports in PDF and individual fields of information in HL7," says company president John Detwiler. "This seems to make everyone happy."

Orchard Software can send reports using the HL7 interface linked to a PDF file that is stored on the AP system or as a PDF file embedded in the HL7 message structure, says Curt Johnson, vice president of marketing and sales. "The embedded PDF," he adds, "is the way most places are moving to try and get the best out of the interfaces they can. The large reference labs are already there."

Another transmission method that is coming to the fore and that may combine the best of both the

HIS, or clinical system, data integrity may be questioned when handling large blocks of text."

SCC "prefers the option of hyperlinks as the method of choice," says Hakim. "Transmitting hyperlinks to documents stored in a central location puts the lab in complete control of the entire content and appearance of the document. There can be no question about erroneous modification of results, mismatch of results, or truncation of data by the recipient. Database differences and limitations are erased. And as a secondary benefit, any images that are embedded in the document are immediately available."

For now, however, many lab system companies continue to address reformatting issues on an individual basis. "We have to discuss it and have unique solutions for every time we integrate with another solution," Johnson says.

Yet not everyone believes the responsibility for solving reformatting problems lies with lab system vendors. "Normally it's not a complaint to us, as the pathology vendor, because the responsibility to display the report falls on the shoulders of the EMR/HIS vendor," says Bill Hughes, CEO of NetSoft. "But we have heard of complaints by the clinician when the EMR vendor fails to be able to display the pathology report effectively."

"Pathology reports can be accurately and unambiguously conveyed only

## Sunquest Laboratory™ Sunquest CoPathPlus™

- Facilitate accurate diagnosis & disease state management
- Integrate tumor registry & cancer reporting
- Automate pathology workflow
- Reduce case turnaround time

HL7 and PDF worlds is clinical document architecture. "CDA," says Dr. Aller, "allows someone to convey formatted information, but at the same time, the data is fielded—so it has the advantages of both—but the downside is that not many systems yet support it."

SCC Soft Computer too views CDA as a reliable transmission method. But despite the benefits of clinical document architecture, "It is a rare case where the receiving system will accept more than the plain ASCII text of the report devoid of special formatting found in the printed form," says Gilbert Hakim, CEO of SCC. And communicating pathology results to other systems as HL7 ASCII text is problematic, he adds. "First the rich format of the report is lost—embedded images are usually not included at all. And second, whether reporting to an EMR,

by showing each lab's authentic report," stresses PathLogix's Detwiler.

Pathview's Mihalik agrees. "How can the lab perform their job if they have no control over how the data is presented? Imagine having two reports where all the data is present in each format but the order and the formatting is different? Can you see yourself saying, 'Please look at the third paragraph in the diagnosis section on page three.' Meanwhile, the clinician doesn't even have a page three on his copy of the report. It's a recipe for disaster."

Adds George Rugg, senior vice president and general manager of laboratory systems for Impac Software, "We think that a single format is not realistic, but that is not to say that we should not strive for a higher level of standardization." Instead, Rugg says, "We think that the authentic report in-

## Anatomic pathology computer systems

tegrity should be preserved, but we need to continue to expand discrete data reporting requirements from the AP labs and link the data at the receiving system. In other words, have the EMRs show pathology results that link to the full report."

Again, NetSoft's Hughes emphasizes that the solution is on the other end. "If a standard graphic format [such as a PDF] would be required by receiving systems of inbound documents, then the whole idea of displaying the original pathology report as reformatted data elements by the EMR/HIS system would be moot."

While the aforementioned vendors generally support the concept of industry standards, they prefer that the industry impose its own rules, rather than having the government do so. "Government intervention would reduce flexibility and would do more harm than good," says Detwiler.

"No offense to the government," adds Rugg, but "we think that task needs to fall on the shoulders of the medical community."

While setting standards might be desirable, says McKesson's Stabile, "The issue will be whether the receiving systems support the standard. If the downstream systems cannot accept the format, who will bear the costs to replace those systems?"

If there were to be additional, new standards, they would have to be fairly broad, explains Johnson, because they would cover not just the anatomic pathology lab but other areas

Detwiler

Rugg

that send reports, such as the clinical lab, radiology, and pharmacy. "The real key is good communication," he adds. "The anatomic pathology group has to understand the needs and the requirements of the end user and what their system is capable of."

At the end of the day, concludes Rugg, the question for which the answer "is perhaps the best indicator of a need for standardization is this: If, as a provider, I received two pathology reports for the same patient [and they looked different], what is the probability that I would order the same treatment regimen based solely on the content of the reports? If the probability is less than 100 percent and is a consistent measure, then there is a problem that we need to address." □

Software provides indexed field in each test definition for LOINC code? Provide LOINC dictionary for each new installation?	no no	no no
Routine results encoded in SNOMED (in version earlier than SNOMED CT)? Routine results encoded in SNOMED CT? AP system uses autoencoder to create SNOMED codes? Percentage of installed sites that represent cases in free text	no yes (at 45% of sites) yes 55%	no no no 100%
No. of installs that use system to provide cancer diagnoses or surveillance data to tumor registries or public health agencies via computer-to-computer interface	6 via older NAACCR standard (delimited format coded for FL, NY, NH)	NAACCR Pathology Laboratory Electronic Reporting, vol. V, version 2.1, available but not installed/38 via older NAACCR standard/2 via nonstandard data feed
Complete AP application service provider solution? Method of charging for ASP service Client software required ASP information conduit Client contracts supported from data center not operated by client How data center is operated	yes fixed fee requires software be installed on a client PC requires use of a private, dedicated circuit 1 by vendor	no — — — — —
Other information systems interfaced Voice-recognition products or partners system uses Histology and cytology devices interfaced User interface in language other than English?	Cerner, McKesson, Eclipsys, Epic, Siemens, GE Healthcare, QuadraMed, Meditech, Keane, HMS, CPSI, Stockell Insite CS, custom Web services (XML) based interfacing designed for voice recognition and dictation systems; Dragon NaturallySpeaking cassette markers/etchers, slide labelers, immunostainers yes (French)	Misys, CPSI, Medisys, A4, eClinicalWorks, Orchard, others packages supporting FileMaker Pro slide labelers, cassette markers, microscope cameras no
Source code? User group? User can modify screens?	escrow yes (meets in person annually) yes	yes no no
Cost (hardware/software/installation and training/monthly maintenance) <ul style="list-style-type: none"> <li>• Smallest stand-alone system</li> <li>• Largest stand-alone system</li> <li>Base price of integrated system, excluding AP configuration</li> <li>• Incremental cost to add smallest AP configuration</li> <li>• Incremental cost to add largest AP configuration</li> </ul>	\$30k/\$30k/\$60k/\$0.45k \$150k/\$500k/\$200k/\$7.5k \$350k \$15k/\$30k/\$40/\$0.45k \$100k/\$300k/\$100k/\$4.5k	\$1k/\$3k/0/0 \$60k/\$35k/\$3k/\$0.3k — — —
Distinguishing features (supplied by vendor)	<ul style="list-style-type: none"> <li>• full integration with SoftLab LIS suite, including cytogenetics, molecular, flow cytometry, HLA</li> <li>• integrated Web-based module (SoftWeb) for remote ordering/requisitions, results/report viewing, printing</li> <li>• powerful features, such as online alerts and full-system audits, for high-volume laboratories</li> </ul>	<ul style="list-style-type: none"> <li>• customized solution with ongoing customized support</li> <li>• low-cost solution for start-up, small, and medium-sized labs</li> <li>• results reporting by Internet Web portal, auto-faxing reports, and custom lab interfaces to various EMR client software systems</li> </ul>
*H=U.S. hospitals, IL=independent labs in U.S., C or GP=clinics or group practices in U.S., OS=other sites in U.S., FI=foreign installations **other=sales, marketing, administration, and other company functions Note: a dash in lieu of an answer means company did not answer question or question is not applicable		

## Anatomic pathology computer systems

Part 14 of 14	Sunquest Information Systems Elinore Craig elinore.craig@sunquestinfo.com 250 S. Williams Blvd. Tucson, AZ 85711 800-748-0692 www.sunquestinfo.com	WebPathLab Peter Williams peter@webpathlab.com 1004 River Rock Drive, Suite 240 Folsom, CA 95630 916-404-1840 www.webpathlab.com
<i>See accompanying article on page 18</i>		
Name of anatomic pathology system	Sunquest CoPathPlus	WebPathLab
First ever AP system installation	1982	2000
Most recent AP system installation (based on Dec. 2008 survey deadline)	2008	December 2008
Last major release of AP system	August 2008	October 2008
No. of contracts for sites operating AP system (H/IL/C or GP/OS/FI)*	320 (290/0/0/0/30)	8 (1/7/0/0/0)
• No. of contracts that went live between Nov. 2007–Nov. 2008	8	3
• No. of contracts not yet live/No. of contracts signed between Nov. 2007–Nov. 2008	13/8	2/2
No. of sites operating AP system (No. of these sites outside U.S.)	500+ (40—Canada, UK, Ireland, Scotland, Denmark, UAE)	8
Percentage of installations that have stand-alone AP systems	1%	100%
Staff to develop—install and support—other**		
• In entire company	371–245–84	7–3–3
• In LIS division (including AP)	—	7–3–3
• In AP systems only	—	7–3–3
No. of workstations in sites operating AP system	5–280	8–500+ (mean, 300)
Range in No. of surgical pathology cases per year in sites operating system	10,000–600,000	2,500–30,000
Range in No. of gynecologic cytology cases per year in sites operating system	10,000–600,000	—
Programming language(s)	C, Visual Basic, PowerBuilder	ASP .Net 2.0, AJAX, XML
Databases and tools used	Sybase, PowerBuilder	MySQL database
Word processor(s) used	Microsoft Word 2003	integrated into Web-based solution—Native; requires Internet Explorer Web browser
Operating system(s)	servers: AIX, Windows 2003; client: Windows XP, 2000	Windows server 2003
Features (listed as a percentage of live installs or based on availability)		
• Surgical pathology information system	100%	100%
• Cytology information system	90%	55%
• Autopsy information system	installed	20%
• Autopsy measurements and organ weights	100%	available through company's LIS or via third party
• Specimen log-in/specimen tracking and retrieval	100%/available fourth quarter 2009	100%/100%
• Entry of block IDs/specimen labels	100%/100%	100%/100%
• Histology slide labels/bar-coded slide labels	installed/80%	100%/available but not installed
• Linear bar codes/two-dimensional bar codes	80%/—	—/available but not installed
• Histology worksheets	installed	100%
• Word processing—vendor specific	100%	100%
• Voice entry of gross description/voice entry of microscopic and final diagnosis	20%/20%	available through company's LIS or via third party (both features)
• Gross and microscopic images integrated in reports	30%	100%
• Electronic signature	100%	100%
• Remote printing of completed reports	installed	100%
• Direct fax reports	95%	100%
• Web-based remote inquiry of reports	installed	100%
• Physician Web access for order entry	installed	100%
• Natural language search capability	100%	100%
• Multi-site or multi-facility-wide area network	35%	100%
• Sound-alike retrieval of patient history	not available	—
• Tumor registry reports/management reports	95%/100%	100%/100%
• Reports sufficient to comply with CLIA '88 regulations	100%	100%
• Comprehensive billing and accounts receivable	installed	100%
• Interface to external billing system	95%	available through company's LIS or via third party
• HIS interface: A/D/T	95%	100%
• HIS interface: result reporting/incoming clinical results	90%/installed	100%/—
• Partin tables or Gleason score calculations	not available	—
• Synoptic reporting	installed	—
• Client services module	installed	—
• Consult management and reporting	90%	100%
Software provides indexed field in each test definition for LOINC code?	no	no
Provide LOINC dictionary for each new installation?	no	no
Routine results encoded in SNOMED (in version earlier than SNOMED CT)?	yes (at 80% of sites)	no
Routine results encoded in SNOMED CT?	yes	no
AP system uses autoencoder to create SNOMED codes?	yes	no
Percentage of installed sites that represent cases in free text	20%	—
No. of installs that use system to provide cancer diagnoses or surveillance data to tumor registries or public health agencies via computer-to-computer interface	NAACCR Pathology Laboratory Electronic Reporting, vol. V, version 2.1, available but not installed/12 via older NAACCR standard (vol. II)	6 via older NAACCR standard (Florida Cancer Data System, Texas Tumor Registry)
Complete AP application service provider solution?	no	yes
Method of charging for ASP service	—	fixed fee or transaction based—user's choice
Client software required	—	browser based
ASP information conduit	—	operates over the Internet
Client contracts supported from data center not operated by client	—	100%
How data center is operated	—	by vendor
Other information systems interfaced	Epic, McKesson, Cerner, Siemens, GE Healthcare, QuadraMed, Eclipsys, Meditech, others	Meditech, EpicCare, Opus, Eclipsys
Voice-recognition products or partners system uses	Nuance Dragon NaturallySpeaking	—
Histology and cytology devices interfaced	cassette and slide engravers, Ventana stainers, Apollo PathPACS imaging	—
User interface in language other than English?	—	yes (Spanish, German, Chinese)
Source code?	escrow	escrow
User group?	yes (meets in person annually, with quarterly regional meetings, and via Internet as set by region)	no
User can modify screens?	yes	yes
Cost (hardware/software/installation and training/monthly maintenance)		
• Smallest stand-alone system	—	0/\$6.5k/0/\$0.25k per pathologist
• Largest stand-alone system	—	0/\$50k/0/\$0.25k per pathologist
Base price of integrated system, excluding AP configuration	—	—
• Incremental cost to add smallest AP configuration	—	—
• Incremental cost to add largest AP configuration	—	—
Distinguishing features (supplied by vendor)	<ul style="list-style-type: none"> <li>scalable solution for the workflow requirements of anatomic pathology and molecular testing</li> <li>increases productivity with integration between clinical, anatomic, molecular, voice recognition, image management, instrumentation, and synoptic reporting</li> <li>company provides diagnostic information solutions and leadership</li> </ul>	<ul style="list-style-type: none"> <li>100% Web based; provides universally secure access</li> <li>complete integrated billing solution reduces billing cycle to as low as seven days and maximizes cash flow</li> <li>increases referring clinician satisfaction by providing online requisition, online reporting, online data mining of all reports, and complete interface with any HL7-capable EMR system</li> </ul>
<p>*H=U.S. hospitals, IL=independent labs in U.S., C or GP=clinics or group practices in U.S., OS=other sites in U.S., FI=foreign installations **other=sales, marketing, administration, and other company functions Note: a dash in lieu of an answer means company did not answer question or question is not applicable</p>
