August 2010 CAP TODAY / 21

For blood gas analyzers, larger menus and new features

Brendan Dabkowski

As testing for blood gas and other critical care analytes continues to migrate from the laboratory to the point of care, caregivers are demanding test systems that are easy to use yet equipped with extensive test menus, says Sheila Gavan of Siemens Healthcare Diagnostics. In the blood gas testing market, customers are asking questions such as: "Can I use a continuous blood gas system in the ER, in the OR, in the ICU?" says Roche Diagnostics' Larry Healy.

The makers of in vitro blood gas analyzers, the focus of this month's product guide on pages 22–38, are developing new instruments and adding tests and features to existing instruments to meet the abovementioned demands and address questions such as the one posed by Healy, Roche's marketing manager for professional diagnostics-hospital.

Roche, for instance, is developing a point-of-care version of its Cobas b 221 blood gas system, and it anticipates filing for FDA 510(k) clearance in December. Using the system, Healy says, caregivers will be able to monitor patients at the bedside quickly and efficiently and "treat them, move them through the hospital continuum, and get them home." The company recently introduced version 7.05 operator software for its benchtop Cobas b 221 blood gas analyzer and plans to launch a new IT connectivity solution in December.

At least two companies have in the past year introduced bilirubin tests on their blood gas systems. Instrumentation Laboratory received FDA 510(k) clearance last month for a total bilirubin assay to run on its GEM Premier 4000 critical care analyzer, while Siemens recently added a neonatal bilirubin parameter to its RapidLab 1200 blood gas analyzer. On the RapidLab 1200, the bilirubin parameter can be used separately or as part of a panel that includes blood gases as well as pH, electrolytes, glucose, lactate, total hemoglobin, and

CO-oximetry, says Gavan, Siemens' global marketing manager, blood gas. It requires only 100 uL of blood, and users can obtain results in one minute. Siemens is developing the same parameter as a software upgrade for its RapidPoint 405 point-of-care blood gas analyzer.

In addition to its new total bilirubin assay, IL will soon introduce a basic metabolic panel with BUN, creatinine, and measured TCO2 on its GEM Premier 4000 critical care analyzer, says IL

Specimen storage containers 2 oz to 165 oz

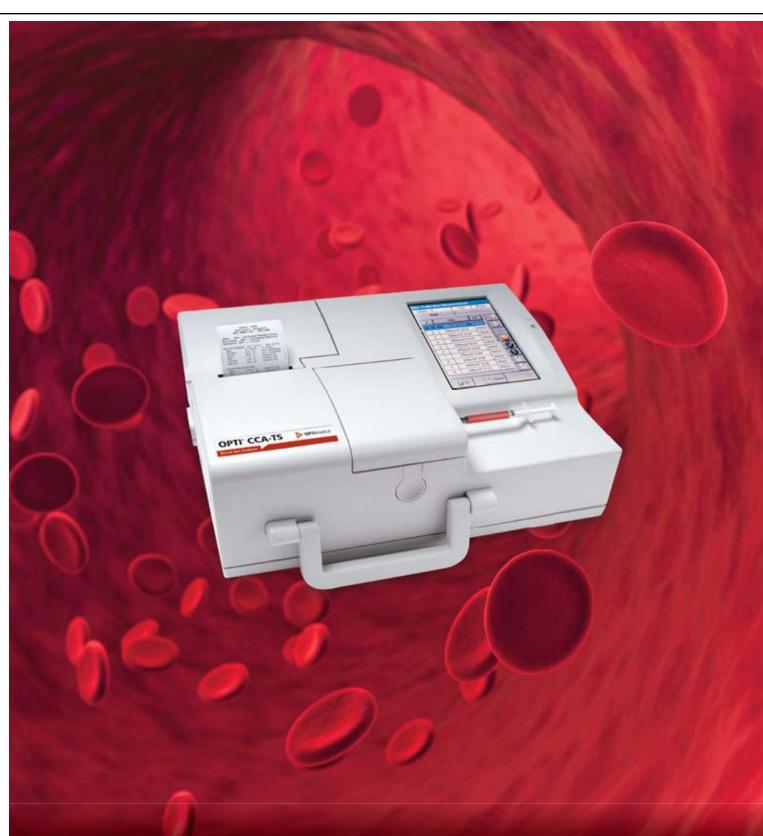

- •2 oz, 3 oz, 4 oz, 5 oz containers are made of polypropylene with leakresistant screw caps.
- •8 oz, 16 oz, 32 oz, 64 oz, 83 oz & 165 oz containers are made of HDPE with tight sealing press-close LDPE lids to minimize evaporation. These containers are stackable.
- •New improved heavy-duty durable construction with extra thick walls.
- •Made of thermoplastic material that is resistant to formalin.
- •Available in convenient use package to save valuable lab space.
- •OEM inquiries welcome.

Ready or not, here we come.

OPTI blood gas and electrolyte analyzers are always ready to go. OPTI analyzers are reliable, easy to use, and low maintenance due to our patented optical fluorescence technology. OPTI Medical offers flexibility with our single and multi-use analyzers - ideal for labs with low to mid-volume testing. To learn more call **800-490-6784** or visit **optimedical.com**.

OPTI and the OPTI Medical logo are trademarks or registered trademarks of OPTI Medical systems, Inc. in the United States and/or other countries. @2010 OPTI Medical.

Blood gas analyzers

continued from page 21

group manager Bill Manchester, who adds that the panel will be "extremely valuable to the emergency department." IL recently began offering automated and customizable operator certification, with exams and advanced regulatory compliance management, for its GEMweb Plus Custom Connectivity information management software. GEMweb Plus now receives admission discharge and transfer transmissions and allows staff to create POC orders, Manchester says.

New from Radiometer America—pending FDA clearance—is the ABL90 Flex compact blood gas system, which, says vice president of marketing Shane Hawes, is similar to the company's ABL80 Flex CO-OX point-of-care blood gas analyzer. The ABL90 Flex improves on the ABL80 Flex system, introduced in 2008, by offering a broader parameter profile, faster measurement speed, higher throughput capacity, and onboard sample mixing, Hawes says.

Nova Biomedical continues to market its Stat Profile pHOx line of blood gas/critical care analyzers, which can provide test results in 45 seconds. Used in the OR, ED, ICU, and stat labs, the analyzers feature color touchscreens, advanced user interfaces, snap-in reagent cartridges, autocalibration, and fully automated quality control, says Rick Rollins, Nova marketing specialist. The analyzers' menus feature 20 measured tests, including a frequently ordered basic metabolic panel and a blood gas panel.

Abbott Point of Care has extended room-temperature expiration on its blood gas cartridges from two weeks to two months, and the company now manufactures individual testing cartridges with bar codes on the pouches, says Kevin Ball, global marketing manager for acute care. And still available from Abbott is the i-Stat 1 handheld analyzer, which runs tests not only for blood gas but also coagulation, cardiac, and chemistries.

The capability to run different types of test panels on one system is important, the companies say, and the increasing demand to standardize point-of-care testing on one platform is helping drive the development of new blood gas analyzers. Says Roche's Healy: "Some of the applications are radically changing, and that's why they're [customers] demanding larger menus. Typically," he adds, customers want "not only the blood gas values and the electrolytes, but they do want metabolites now; they want glucose and lactate, in particular." Manufacturers will also need to address requests that their products integrate informatics and data-management solutions at the point of care, says Siemens' Gavan. Healy predicts: Many new instruments will incorporate sensor technology. "Will it be indwelling sensors? Will it be clips that you put on people's fingers?" he asks. Only time will tell.

CAP TODAY's guide to in vitro blood gas analyzers includes instruments from the aforementioned manufacturers and from ITC and Opti Medical Systems. Companies supplied the information listed. Readers interested in a particular analyzer should confirm it has the stated features and capabilities.

Barometric pressure Analytical method(s), technology(ies) employed	measured optical fluorescence and reflectance	measured optical fluorescence and reflectance
Device is part of a series of related models	yes, Opti series	yes, Opti series
User list or group available Device warranty	yes (upon request) 1 year (service contract available for subsequent years)	yes, upon request 1 year (service contract available for subsequent years)
Loaner devices provided	yes	yes
Average expected life of device Open or closed system/External gas tanks required	7 years closed/no	>7 years closed/no
For POC testing or laboratory	POC & laboratory	POC & laboratory
POC: Uses disposable prepackaged reagent/Electrode system for analysis	reagent/multiuse cartridge	single-use cassettes/optode
No. of disposable reagent system units in basic shipment package	4	25 individual packaged cassettes
No. of samples analyzed per one disposable reagent, electrode system List price per disposable reagent system	50 contact Opti Medical	1 depends on cassette configuration–contact Opti Medical
Reagent unit storage requirements Shelf life of disposable units	room temperature cassette: 7 months; fluid pack: 12 months	room temperature cassette: 6 to 12 months, depends on type
		, , , , , , , , , , , , , , , , , , ,
Laboratory: No. of different disposable reagents required to maintain device	2	1
Max. No. of specific analyte reagents that can reside in device at once Shelf life	8 cassette: 7 months; fluid pack: 12 months	8 cassette: 6 to 8 months, depends on type
Cost per test/Reagent cost per test	depends on volume—contact Opti Medical	depends on volume—contact Opti Medical
Calibrations required Calibration frequency	2 point (automatic) one point: after every sample or 30 minutes; two point: every 3 hours	1 point (automatic) with each cassette
Calibrants traceable to NIST standards	yes	yes
Internal QC program recommended	3 levels automatic QC run at least once per day	liquid QC with change of cassette lot no. or 2-month intervals; electronic QC-1 level per 8 hours of operation
QC features	auto QC, statistics reports	electronic QC, statistics reports
Remote control of device from laboratory System can use LOINC to transmit results to LIS	no no	no no
How labs get LOINC codes for reagent kits	-	-
Detects clots within analysis chamber	yes	yes
Specimen types suitable for device Acceptable anticoagulants	plasma, serum, whole blood heparin	plasma, serum, whole blood heparin
Sampling technique Suitable for samples from well neonates/Sick neonates	automatic aspiration yes/yes	automatic aspiration yes/yes
Sample size for complete panel of analyte results	125 µL	125 μL, 60 μL blood gas only cassette (in development),
Sample size differs with No. of analytes selected Recommended collection device	no heparinized syringe, capillary, Comfort Sampler	no heparinized syringe, capillary, Comfort Sampler
Provides for patient temperature corrected results Time from sample introduction to result availability	yes ~1 minute	yes ~1 minute from sample aspiration
Max. No. of patient samples per hr/Max. No. of measured parameters per hr	24/192	24/192
Optimal throughput when calibrated and awaiting specimens Calibration can be interrupted to perform stat sample	24 tests per hour	24 test per hour
Contraindications	no none	no none
Known interferences Restrictions based on Hct	no	no
Sampler has self-wiping probe	no	no, single use
Time required for maintenance by lab personnel Onboard diagnostics for troubleshooting/Limited to software	weekly: 1 min; quarterly: 5 min yes/no	weekly: 1 min; quarterly: 5 min yes/no
Diagnostics performed through modem	no	no
Training & certification program for user	yes (1 to 2 days on site)	yes (on site as needed)
Method of analyst ID in system Response for hardware & software failure/User ID & QC failure/	bar code or secure PIN for 300 operators error message/QC lockout/error message with automatic retry; power: memory	bar code or secure PIN for 300 operators error message/QC lockout/error message, memory recovery
Calibration & power failure	recovery	
Supports bar-code scanning of	oper. & patient IDs, reag. lot no., QC ranges, expiration	oper. & patient IDs, reag. lot No., QC ranges, cassette lot no., expiration, factory
		calibration info. & cassette type
User can search for and review previous patient results on screen Built-in printer/Data port	yes yes/RS-232, Ethernet	yes yes/RS-232, Ethernet
Information on hard copy report	patient ID, results, patient demographics (customized), critical ranges	patient ID, results, patient demographics (customized), critical ranges
Analyzer connects to	directly to LIS/HIS, DMS that in turn connects to LIS/HIS, Prism POC data	directly to LIS/HIS, DMS that in turn connects to LIS/HIS, Prism POC data
Interface standards supported	manager Meditech, Sunquest/Misys, Telcor, CPSI, Cerner, HMS, Datacare, AEGIS POC	manager Meditech, Sunquest/Misys, Telcor, CPSI, Cerner, HMS, Datacare, Aegis POC
To upload patient & QC results, how analyzer connects to	direct serial, hospital network	direct serial, hospital network
external system Information included in transmission from analyzer to external system	device unique identifier, oper. & patient IDs, results, QC identifier, all info.	device unique identifier, oper. & patient IDs, results, QC identifier, all info.
Hardware/Software for data management system	pertinent to patient & QC data Prism POC data manager	pertinent to patient & QC data Prism POC data manager
No. of different management reports system produces	40	40
Contents downloaded from DMS to analyzer	none	none

Barometric pressure Analytical method(s), technology(ies) employed	recorded pH, Na, Cl, iCa, K: potentiometry using ISE; pCO2: potentiometry based on	measured, tracked pH: potentiometry; pC02: Severinghaus electrochemical; p02: amperometric;
Analytical motification, technology (100) employed	Severinghaus; p02: amperometric meas. (Clark); glucose: amperometric-glucose	Hct: calculated; tHb: spectrophotometric; Na, Cl, iCa, K: ISE; lactate: lactate
Device is part of a series of related models	oxidase; Hct: conductivity; co-oximetry: spectrophotometric yes	oxidase; glucose: glucose oxidase; total neonatal bilirubin: spectrophotometric yes, series offers different analyte options
User list or group available	yes, through local sales rep	yes, through local sales rep
Device warranty Loaner devices provided	1 year yes	1 year no
Average expected life of device Open or closed system/External gas tanks required	7 to 10 years closed/no	7 to 10 years closed/no
For POC testing or laboratory	POC testing and laboratory	laboratory and POC testing
POC:		
Uses disposable prepackaged reagent/Electrode system for analysis	yes, multi-use cartridge	multi-use cartridges, electrode measurement chamber
No. of disposable reagent system units in basic shipment package No. of samples analyzed per one disposable reagent, electrode system	1 measurement and 1 wash/waste cartridge 250, 400, 750 samples	1 reagent cartridge, 1 wash cartridge Reagent cartridge is not sample dependent
List price per disposable reagent system	varies based on configuration	
Reagent unit storage requirements	refrigeration	Reagent cartridge/AQC cartridge – refrigeration; wash cartridge – room temperature
Shelf life of disposable units	9 months	reagent/wash cartridge: 8 months; AQC cartridge: 9 months; electrodes: varies
		based on type
Laboratory:	1 magazroment agricidas 1 magazrosas agricidas	1 regrent cartridge 1 week cortridge
No. of different disposable reagents required to maintain device Max. No. of specific analyte reagents that can reside in device at once	1 measurement cartridge, 1 wash-waste cartridge 1 measurement cartridge, 1 wash-waste cartridge	1 reagent cartridge, 1 wash cartridge 1 reagent cartridge, 1 wash cartridge, all electrodes
Shelf life	9 months	electrodes: vary based on type; reagent cartridge: 8 months; wash cartridge: 8 months; AQC cartridge: 9 months
Cost per test/Reagent cost per test	varies based on configuration	varies based on configuration
Calibrations required	1 & 2 point (automatic)	1 & 2 point (manual & automatic)
Calibration frequency	1 point: 30 min; 2 point: 2 hrs	1 point: every 30 min; 2 point: every 8 hrs
Calibrants traceable to NIST standards Internal QC program recommended	yes AQC cartridge, fully user programmable	yes AQC cartridge, fully user programmable
QC features	AQC cartridge, L-J plots, comparable plots, statistical calculations, monthly cum.	L-J plots, comparable plots, statistical calculations, monthly cum. reports
Remote control of device from laboratory	reports (available with external system) yes	(available with external system) yes
System can use LOINC to transmit results to LIS	yes	=
How labs get LOINC codes for reagent kits		_
Detects clots within analysis chamber	yes	yes
Specimen types suitable for device Acceptable anticoagulants	whole blood, capillary, mixed venous, arterial, venous heparin	whole blood, capillary, mixed venous, arterial, venous heparin
Sampling technique Suitable for samples from well neonates/Sick neonates	aspiration yes/yes	aspiration yes/yes
Sample size for complete panel of analyte results	100 µL	95 to 175 µL
Sample size differs with No. of analytes selected Recommended collection device	no syringe or capillary	yes (microsample mode available) syringe or capillary
Provides for patient temperature corrected results	yes	yes
	60 seconds	60 seconds
Time from sample introduction to result availability Max. No. of patient samples per hr/Max. No. of measured	25/—	24/up to 336 tests
Max. No. of patient samples per hr/Max. No. of measured parameters per hr	25/—	24/up to 336 tests
Max. No. of patient samples per hr/Max. No. of measured	25/— 25 samples per hour yes	24/up to 336 tests 24 samples per hour yes
Max. No. of patient samples per hr/Max. No. of measured parameters per hr Optimal throughput when calibrated and awaiting specimens	25 samples per hour yes if calibration is interrupted repeatedly, it will force a mandatory calibration to be	24 samples per hour
Max. No. of patient samples per hr/Max. No. of measured parameters per hr Optimal throughput when calibrated and awaiting specimens Calibration can be interrupted to perform stat sample Contraindications Known interferences	25 samples per hour yes	24 samples per hour yes
Max. No. of patient samples per hr/Max. No. of measured parameters per hr Optimal throughput when calibrated and awaiting specimens Calibration can be interrupted to perform stat sample Contraindications Known interferences Restrictions based on Hct	25 samples per hour yes if calibration is interrupted repeatedly, it will force a mandatory calibration to be completed before sampling benzalkonium no	24 samples per hour yes none contact vendor
Max. No. of patient samples per hr/Max. No. of measured parameters per hr Optimal throughput when calibrated and awaiting specimens Calibration can be interrupted to perform stat sample Contraindications Known interferences Restrictions based on Hct Sampler has self-wiping probe	25 samples per hour yes if calibration is interrupted repeatedly, it will force a mandatory calibration to be completed before sampling benzalkonium no yes	24 samples per hour yes none contact vendor no yes
Max. No. of patient samples per hr/Max. No. of measured parameters per hr Optimal throughput when calibrated and awaiting specimens Calibration can be interrupted to perform stat sample Contraindications Known interferences Restrictions based on Hct Sampler has self-wiping probe Time required for maintenance by lab personnel	25 samples per hour yes if calibration is interrupted repeatedly, it will force a mandatory calibration to be completed before sampling benzalkonium no yes maintenance free	24 samples per hour yes none contact vendor no yes weekly: 5 min; monthly: 5 min
Max. No. of patient samples per hr/Max. No. of measured parameters per hr Optimal throughput when calibrated and awaiting specimens Calibration can be interrupted to perform stat sample Contraindications Known interferences Restrictions based on Hct Sampler has self-wiping probe Time required for maintenance by lab personnel Onboard diagnostics for troubleshooting/Limited to software Diagnostics performed through modem	25 samples per hour yes if calibration is interrupted repeatedly, it will force a mandatory calibration to be completed before sampling benzalkonium no yes maintenance free yes/no no	24 samples per hour yes none contact vendor no yes weekly: 5 min; monthly: 5 min yes/no no
Max. No. of patient samples per hr/Max. No. of measured parameters per hr Optimal throughput when calibrated and awaiting specimens Calibration can be interrupted to perform stat sample Contraindications Known interferences Restrictions based on Hct Sampler has self-wiping probe Time required for maintenance by lab personnel Onboard diagnostics for troubleshooting/Limited to software	25 samples per hour yes if calibration is interrupted repeatedly, it will force a mandatory calibration to be completed before sampling benzalkonium no yes maintenance free yes/no	24 samples per hour yes none contact vendor no yes weekly: 5 min; monthly: 5 min yes/no
Max. No. of patient samples per hr/Max. No. of measured parameters per hr Optimal throughput when calibrated and awaiting specimens Calibration can be interrupted to perform stat sample Contraindications Known interferences Restrictions based on Hct Sampler has self-wiping probe Time required for maintenance by lab personnel Onboard diagnostics for troubleshooting/Limited to software Diagnostics performed through modem Training & certification program for user Method of analyst ID in system	25 samples per hour yes if calibration is interrupted repeatedly, it will force a mandatory calibration to be completed before sampling benzalkonium no yes maintenance free yes/no no yes password (customizable)	24 samples per hour yes none contact vendor no yes weekly: 5 min; monthly: 5 min yes/no no yes password (customizable)
Max. No. of patient samples per hr/Max. No. of measured parameters per hr Optimal throughput when calibrated and awaiting specimens Calibration can be interrupted to perform stat sample Contraindications Known interferences Restrictions based on Hct Sampler has self-wiping probe Time required for maintenance by lab personnel Onboard diagnostics for troubleshooting/Limited to software Diagnostics performed through modem Training & certification program for user	25 samples per hour yes if calibration is interrupted repeatedly, it will force a mandatory calibration to be completed before sampling benzalkonium no yes maintenance free yes/no no yes	24 samples per hour yes none contact vendor no yes weekly: 5 min; monthly: 5 min yes/no no yes
