

3D surgical microscopes, 1/14

January 2014—The first 3D surgical microscopes from Leica Microsystems with TrueVision 3D technology inside are now available to customers. By incorporating the digital smart 3D system inside select models of Leica's surgical microscopes, Leica and TruVision have eliminated the need for a separate 3D cart.

Surgeons can control the 3D recording functions without interrupting their workflow using the microscope's hand and foot controls. The system simultaneously streams 3D and 2D video to external video monitors in the OR or over distance.
