

Agilent releases SureSelect RNA reagent kit

October 2020—Agilent Technologies released the SureSelect XT HS2 RNA reagent kit. The kit enables users to accurately profile gene expression and detect RNA fusions using low-input FFPE samples and aims to significantly improve efficiency, especially in labs that process both DNA and RNA samples for next-generation-sequencing applications.

SureSelect XT HS2 RNA supports 384 unique dual sample indexes, allows users to multiplex hundreds of samples in one sequencing run, and features molecular barcodes for more efficient deduplication of sequencing reads and more accurate gene expression analysis.
