

Antigens and antibodies for assay development, 2/17

February 2017—Meridian Life Science released a new brochure on its best performing tropical and vector-borne antigens and antibodies, including its new Zika reagents. Important troubleshooting tips are included for reducing cross-reactivity in flavivirus assays and increasing IgM detection sensitivity.

The company also offers antigens and antibodies for assay development of atypical pneumonia, including mycoplasma, chlamydia, and legionella, detailed in its respiratory diseases catalog.
