

Automated system for NGS library prep, 2/14

February 2014—To meet the needs of today's next-generation sequencing projects, Aurora Biomed offers the VERSA NGS Library Prep Workstation for high throughput preparation of sample libraries. VERSA enables automated processing of up to 96 libraries in parallel with the high precision needed for quality results.

The workstation includes a bead mixer and bar-code scanner. Additional key features include a flexible open design, precise and accurate liquid handling, high throughput, low running costs, VERSAware user software, and technical support.
