

Bausch and Lomb to distribute Leica's products, 6/13:96

Leica Microsystems and Bausch and Lomb announced that Bausch and Lomb will distribute Leica's ophthalmic surgical microscopes and accessories in select markets across Europe, the United States, India, and Latin America.

The partnership combines Leica's ophthalmic microscopes with Bausch and Lomb's global commercial infrastructure, while expanding Bausch and Lomb's offerings for ophthalmic surgeons. Under the agreement, Bausch and Lomb can now offer Leica Microsystems' ophthalmic portfolio, which ranges from routine cataract microscopes to high-end retinal systems. Among these is the Leica M822 for cataract procedures, which combines LED and halogen lighting for a stable red reflex.
