Nov. 3, 2025—**BD** has received FDA 510(k) clearance and CE marking for its Enteric Bacterial Panel and Enteric Bacterial Panel Plus for the BD Cor system. BD EBP offers a range of targets for enteric bacterial pathogens, including *Salmonella* spp., *Campylobacter* spp. (*C. jejuni*, *C. coli*), *Shigella* spp./enteroinvasive *Escherichia coli*, and Shiga toxin-producing *E. coli*. BD EBP Plus detects enterotoxigenic *E. coli* and heat-labile and heat-stable enterotoxin genes. The panel also identifies *Plesiomonas shigelloides*, *Vibrio* spp. (*V. vulnificus*, *V. parahaemolyticus*, *V. cholerae*), and *Yersinia enterocolitica*.

The BD Cor system has a capacity of nearly 1,650 tests and delivers up to 1,000 sample results in 24 hours with barcode-driven traceability and remote system management. It offers up to seven hours of walkaway time, requires under 15 minutes to load, and uses room-temperature reagents that require no reconstitution.
