

BD Max enteric panel gets FDA clearance

March 2019—BD announced FDA 510(k) clearance of its BD Max enteric viral panel, a molecular diagnostic test for the direct qualitative detection and differentiation of enteric viral pathogens that cause viral gastroenteritis. The panel is designed for targeted detection of the viral cause of infectious diarrhea symptoms and can detect norovirus, rotavirus, adenovirus, human astrovirus, and sapovirus. The panel runs on the BD Max molecular system and can return results in less than 3.5 hours.
