

Beckman expands flow cytometry line, 9/13

Beckman Coulter Life Sciences has acquired the flow cytometry business assets of ReaMetrix India, a Bangalore-based life science technology company. The transaction provides Beckman Coulter with temperature-stable, single-dose, multi-color antibody cocktails targeting the HIV monitoring and clinical research markets.

ReaMetrix products complement Beckman's flow cytometry portfolio with reagents that will simplify the sample preparation process and provide standardized reagent combinations.

ReaMetrix dry temperature-stable reagents are CE marked for in vitro diagnostic use in Europe; the reagents are not currently available or cleared for use in the United States.
