Aug. 26, 2024—[Bio-Rad Laboratories](#) has launched its Specialty Immunoassay Plus, a four-level, comprehensive, independent specialty immunoassay quality control designed to monitor the precision of laboratory specialty immunoassay testing procedures. The product is available in barcoded, load-and-go IntelliQ and standard vial Liquichek configurations and features clinically relevant analytes such as procalcitonin, interleukin-6, active vitamin B12, anti-TSH receptor, thyroid stimulating immunoglobulins, fructosamine, and others. It also contains optimized vitamin D ranges to support Vitamin D Standardization Program-compliant assays and improved intact parathyroid hormone open-vial stability to minimize QC waste. With the Unity data management software, laboratories can compare results across a large peer group of reporting labs.
