March 2024—Bio-Rad Laboratories has published the third workbook in a P.A.C.E.-approved series designed to provide lab professionals with the training and education needed to maintain reliable test results. “Quality Control Process Optimization with Cost of Quality Application” focuses on a practical approach of cost of quality to the laboratory workflow process of quality control. After using the workbook, laboratorians will be able to construct a basis worksheet to calculate the failure costs of a selected failed laboratory process.

Laboratory professionals can receive a certificate after successfully completing a short exam at the end of the workbook and earn 2.5 contact hours. The series is free of charge and available at <https://bit.ly/3SGHdv7>
