

Bio-Rad quality control

written by CAP TODAY

January 21, 2019

January 2019—Bio-Rad has announced its IntelliQ selection of quality controls, available in barcoded, load-and-go tubes. This new configuration is designed to help optimize workflow efficiency and improve the laboratory's risk management program. IntelliQ also enables laboratory staff to increase efficiency with sample tracking and easy XML data upload. Users have access to the Unity data management program and large peer group comparisons. Accompanying Unity software tools also help labs to achieve their quality goals. IntelliQ is compatible with Siemens Healthineers' Atellica Solution.
