

BioDot, ASI to deliver genetic analysis solution, 7/13:108

Applied Spectral Imaging and BioDot have entered into an agreement under which both companies will engage in combined sales and marketing of a product that will directly link ASI's GenASIs imaging and analysis instrument and BioDot's CellWriter automated dispensing system for FISH and karyotyping.

The combined solution enables an end-to-end automated workflow for FISH and karyotyping, from slide production to sample analysis and result reporting.

ASI and BioDot have confirmed the effectiveness of the combined solution to perform automated FISH and karyotyping. As part of the product offering the two companies will offer a set of software connectors, enabling bidirectional and seamless data integration between the two solutions.
