

Biological stabilizers for molecular controls, 8/14

August 2014—Microbiologics has partnered with Biomatrix to license Biomatrix's DNASTable and RNASTable technology for use in its line of molecular controls for rapid diagnostic instruments and assays. "Incorporating Biomatrix DNA and RNA stabilizers in our molecular standards not only facilitates international shipping, it also increases the storage convenience and reliability of these products, which results in considerable cost savings for our customers," Brian Beck, PhD, Microbiologics vice president of molecular products and services, said in a statement.
