

BioMérieux launches BioFire Fireworks software

June 2023—BioMérieux has launched BioFire Fireworks, an integrated software solution for BioFire systems that is part of the company's Vision Suite data-management product line. Fireworks provides access to a centralized data-management Web portal, giving users insights and analytics into BioFire system performance, utilization, pathogen surveillance, and workflow management. The software was designed, developed, and implemented following industry standards and regulations and gives customers complete control over their data.
