

CE-IVD mark for PlexPCR VHS test, 2/18

February 2018—Speedx announced it has received CE-IVD marking for its PlexPCR VHS multiplex qPCR test. The test offers a single-well solution to cover the detection and differentiation of the main causes of genital and oral lesions—herpes simplex virus types 1 and 2, *Treponema pallidum* (syphilis), and varicella zoster virus. Validated for use on multiple lesion specimen types, the test is designed to streamline workflows and support rapid, appropriate clinical management of infections with similar symptoms.
