

CE mark for human serum albumin, 11/15

November 2015—Irvine Scientific received CE mark approval for its Human Serum Albumin Solution (100 mg/mL) in normal saline. HSA is used in assisted reproductive procedures as a protein supplement for gamete and embryo manipulation.

Irvine Scientific's HSA is manufactured according to current Good Manufacturing Practice guidelines and international standards using only high-quality, low-endotoxin raw materials. Every lot undergoes extensive quality testing including for sterility, biocompatibility by mouse embryo assay, and to meet low-endotoxin specifications, as well as for pH and osmolality.
