

CE mark for shiga toxin test, 9/16

September 2016—Great Basin Scientific announced that its Shiga Toxin Direct Test received CE marking under the European directive on in vitro diagnostic medical devices. The test is now qualified for distribution in more than 32 countries across Europe.

The Shiga Toxin Direct Test is an FDA-approved standalone molecular test that enables the precise detection of shiga toxin-producing E. coli. The test aims to provide laboratory technicians with a streamlined workflow, enabling sample-to-result testing with less than one minute of hands-on time and no specimen enrichment step.
