

## Cell stabilization product line

December 2018—Mawi DNA Technologies launched its iSwab-Cells cell stabilization product line. Designed to collect and stabilize intact cells for up to four weeks at room temperature, the sample collection system enables users to perform multiple omics analyses from the same sample. The iSwab-Cells products include the iSwab noninvasive buccal cell collection system and a standalone stabilization buffer for cells within different biological matrices, such as saliva.
