

[ChromaCode launches multidrug resistance assay](#)

written by CAP TODAY
January 18, 2020

January 2020—ChromaCode has launched the HDPCR Multi-Drug Resistance (MDR) Panel, a highly multiplexed real-time PCR assay. The panel detects nine of the most common causes of Gram-negative multidrug resistance and toxigenic *Clostridium difficile* in a 96-well format. Key features of the panel, the company reports, include seamless integration onto common qPCR instrumentation, scalable throughput, and streamlined data analysis, management, and test customization with ChromaCode Cloud software. The MDR panel is for research use only.
