

Cincinnati Children's Hospital installs Atellica Solution

November 2018—Siemens Healthineers announced that Cincinnati Children's Hospital Medical Center is the first children's hospital worldwide to install the Atellica Solution immunoassay and clinical chemistry analyzers.

The Atellica Solution will allow the hospital to complete its routine testing panels while using a smaller sample size. Cincinnati Children's Hospital Medical Center will replace three chemistry and immunoassay analyzers with one Atellica Solution. Siemens reports that by consolidating the number of testing platforms, the laboratory will drive a projected savings of more than \$250,000 annually.
