

## Clinical study for GI panel, 9/13

BioFire Diagnostics has begun clinical and analytical studies at several hospital-based laboratories in the U.S. to evaluate the company's FilmArray gastrointestinal panel. BioFire plans to seek CE IVD marking and FDA clearance for the test.

The 23-target GI panel tests for common bacteria, viruses, and protozoa that cause infectious diarrhea. The test is performed in about an hour directly from stool in transport media.
