

Cobas Liat PCR system with four assays, 7/17

July 2017—Roche announced the CE-IVD launch of the Cobas Liat PCR System with four assays, including a 20-minute real-time PCR nucleic acid test to detect *Clostridium difficile*. Countries accepting the CE mark are the first to receive access to the Cobas Cdiff test, which detects *C. diff* in stool specimens from symptomatic patients. The expanded menu of assays includes the respiratory portfolio of Cobas Strep A, Cobas Influenza A/B, and Cobas Influenza A/B & RSV. The system provides results in 20 minutes or less for all assays in the portfolio.
