

## Colorectal cancer screening kits, 4/14

April 2014—EntroGen expanded its line of colorectal cancer screening products to include the EntroGen K-Ras and N-Ras Mutation Analysis kits. The kits are updated to include coverage for exon 2, 3, and 4 mutations in both genes. The company obtained a CE IVD mark for these products.

The real-time PCR kits now cover all known mutations in codons 12, 13, 59, 61, 117, and 146 of the K-Ras and N-Ras genes, as well as the BRAF V600E mutation, providing a screening tool that has high sensitivity and a quick turnaround time.
