Compact preanalytical workstation, 10/17

October 2017—Aim Lab Automation Technologies unveiled at the AACC annual meeting the PathFinder 350D, the latest PathFinder automation platform for decapping and sorting incoming blood collection tubes directly into various analyzer racks ready for analysis. Other features of the system include the ability to register incoming samples, a tube barcode orientation option, an expandable deck to double onboard capacity, and an option to almost double throughput.
