

# Competency review software for EasyCell

Medica's Competency Review software for its EasyCell assistant cell imaging system for hematology labs integrates evaluations of technologists into the laboratory's daily routine.

With the software, an instructor can train and evaluate the expertise of technologists in classifying white cells and red cell morphology.

Medica's Competency Review software is an optional feature of the EasyCell assistant. Once integrated, the competency review requires no additional software or Internet connection.

Reviews are integrated into the laboratory's routine as the instructor selects specific slide files from the lab's daily workflow and groups them into a test set. After creating an answer key, the instructor assigns the test and, upon completion, evaluates the technologist's progress.

Instructor-issued reports show individual skill levels, permitting proficiency evaluation. Confidentiality is protected throughout.
