

Copan and MetaSystems' global partnership, 7/14

July 2014—Copan and MetaSystems signed a global and exclusive agreement for the integration of an automatic microscopy slide scanning system, provided by MetaSystems, with WASPLab. The partnership provides Copan customers a fully automated system for the acquisition of microscopy images of Gram slides (under the brand Metafer) integrated with the WASPLab environment. This solution allows the Web-based WASPLab user interface to show, on a single screen, images of culture plates, the LIS information, the results from other instruments, and images taken by the Zeiss microscope connected with the Metafer system.
