

## Customized system for cytogenetics assay, 4/13:88

Hamilton Robotics announced that the CytoScan automated target preparation solution from Affymetrix is built on Hamilton's customizable Microlab Nimbus 96 workstation. The Nimbus 96 instrument automates target preparation for the CytoScan cytogenetics solution, which offers broad coverage for detecting human chromosomal aberrations.

The Microlab Nimbus 96 platform is fast and easy to use and offers effective pipetting. The system combines accurate liquid measurement with software that provides workflow control, file handling, and integration with third-party devices. The system processes up to 96 samples at a time.

CytoScan cytogenetics solution is for research use only.
