

## Disease state sera, 12/17

**December 2017**—Binding Site's Immunologicals Group offers a comprehensive line of disease state sera in its portfolio of products available to in vitro diagnostic manufacturers and clinical research facilities. The line of products follows all current regulatory and quality standards guidelines and provides materials from a variety of disease state conditions, including ANAs, ANCAs, aPLs, ENAs, infectious and contagious diseases, inflammation markers, and autoantibodies focused on a variety of human organs and tissues. Materials are available in bulk formats and in volumes of up to 3 L per unit for use in the manufacturing of calibration and/or quality control materials. Sample material is available on request. The company can offer comprehensive data on analyte positive as well as negative data, along with a comprehensive certificate of analysis.
