Distribution agreement, 10/15

Lab Sensor Solutions will partner with MarketLab to distribute T-Tracks, which tracks, in real time, the temperature and location of clinical samples in transit, preventing laboratory specimen spoilage and loss and ensuring regulatory compliance. T-Tracks data are delivered to lab personnel's desktops, laptops, and mobile devices. The system's main components are NIST-traceable sensors, a mobile-phone application, and a cloud-based, dashboard-alerting system that runs in any Web browser.

The T-Tracks service starter pack is available from MarketLab as a one-year subscription.
