

Double-staining polymer kit, 12/17

December 2017—Vector Laboratories introduced the ImmPress Duet Double-Staining Polymer Kit for immunohistochemistry. The kit enables fast, well-defined localization and visualization of two different target antigens on the same tissue section. ImmPress Duet combines highly active horseradish peroxidase and alkaline phosphatase enzyme polymers to anti-mouse IgG and anti-rabbit IgG affinity-purified, highly cross-adsorbed secondary antibodies. These reagents are then blended at optimized dilutions to provide a stable prediluted, ready-to-use HRP/AP formula that will detect mouse and rabbit primary antibodies and facilitate a one-step double label detection protocol.
