

ELISAs for mitragynine, synthetic cannabinoids, 6/13:96

Randox Toxicology has developed an ELISA that targets UR-144, XLR-11, and additional synthetic cannabinoid compounds, which are commonly found in new “Spice” and “K2” blends. Together with the company’s JWH/AM2201 synthetic cannabinoids ELISA, the UR-144/XLR-11 ELISA provides a comprehensive solution for the rapid detection of more than 55 current synthetic cannabinoids in urine, blood, and oral fluid.

Randox also offers an ELISA that detects mitragynine and its metabolites in urine and blood specimens. Mitragynine is found in the designer drug Kratom.
