

Eppendorf launches 25-mL conical tubes

February 2020—Eppendorf has launched 25-mL conical tubes. It is the same diameter as a conventional 50-mL conical tube and comes with either the SnapTec snap cap or screw cap, both of which have high centrifugation stability. The SnapTec cap allows for single-handed opening and closing of the cap. The wide opening of the tube, combined with the lower height, is designed to offer easy sample access.
