

## Expanded enzyme offering, 1/16

**January 2016—Worthington Biochemical announced distribution rights to the Celase GMP** compliant enzyme from Cytori Therapeutics. The Celase GMP product offering allows Worthington customers focused on cell isolation studies to facilitate a smooth transition from bench and animal research to downstream clinical applications. Celase GMP is a proprietary enzyme containing a unique blend of collagenase, neutral protease, and buffer salts that are produced using avian and mammalian tissue-free raw materials and are aseptically processed, sterile filtered, and highly purified under GMP guidelines. A single, sterile, ready-to-use enzyme containing both collagenase and a neutral protease is suitable for a wide range of adipose stem cell, biomedical, and bioprocessing applications.
