

Expanded use of Validate Fibrinogen kit

July 2018—LGC Maine Standards announced that its Validate Fibrinogen for linearity and calibration verification is available on Instrumentation Laboratory's ACL Top 500, Siemens Healthineers' Sysmex CS-2500, and Diagnostica Stago's STA-R Evolution hemostasis test systems. The kits, in a human plasma matrix, evaluate five levels of recovery across the fibrinogen analytical measurement range and are liquid and ready to use.
