

FDA 510(k) clearance for BD FACSVia, 7/17

July 2017—Becton Dickinson received 510(k) clearance from the FDA for its BD FACSVia, a flow cytometer system with a leucocount reagent assay used in residual white blood cell enumeration. When used with the BD Leucocount kit and BD Trucount tubes, the FACSVia system provides a simple solution for identifying and counting rWBCs in leucoreduced blood products. Its compact design allows it to fit on a benchtop or within a hood.
