April 2020—The U.S. Food and Drug Administration approved Palforzia (Peanut [Arachis hypogaea] Allergen Powder-dnfp) to mitigate allergic reactions, including anaphylaxis, that may occur with accidental exposure to peanuts. Treatment with Palforzia (Aimmune Therapeutics) may be initiated in individuals ages four through 17 years with a confirmed diagnosis of peanut allergy and may be continued in individuals four years of age and older. Those who take Palforzia must continue to avoid peanuts in their diets.
