

FDA clears BioMérieux Nephrocheck test on Vidas platform

July 29, 2022—The FDA has cleared the [BioMérieux](#) Vidas Nephrocheck assay, for use to detect kidney stress in patients at risk of acute kidney injury.

The Nephrocheck test detects kidney stress prior to damage and is intended to be used in conjunction with clinical evaluation as an aid to support the risk assessment of moderate or severe AKI in patients who are acutely ill. Nephrocheck test kits are FDA cleared on the Astute140 meter (Astute Medical) and Vidas 3 instrument; the Vidas Nephrocheck test will be available in the United States next year.
