

General Data LaserTrack Flex cassette printer

July 2023—General Data Healthcare's Flex is the latest addition to its LaserTrack portfolio of cassette printers.

Cassette capacity starts at 480 cassettes and can be upgraded to a capacity of 800 cassettes. The printer uses technology that the company says produces razor-sharp, high-resolution text and barcodes that deliver a greater than 99 percent first-time scan rate. The standard configuration prints directly on the face of a cassette but can be upgraded to also print directly on one or both sides of a cassette. Flex software can be interfaced with most major LIS and LIMS systems.

More information about the Flex is available at this link: <https://youtu.be/VrVDEzdZDNY>
