

Genetic analyzers, 8/13:88

Health Canada has approved Life Technologies' Applied Biosystems 3500 Dx/3500xL Dx genetic analyzers CS2 for diagnostic use.

The Applied Biosystems 3500 Dx series genetic analyzers deliver high-quality performance, high throughput, and increased productivity for clinical laboratories. The 3500xL Dx is an automated 24-capillary-based Sanger sequencer; the 3500 Dx is an eight-capillary instrument.

Together, both analyzers provide hospitals the flexibility to meet unique throughput demands designed for a range of sequencing applications.

In February, the 3500 Dx/3500xL Dx genetic analyzers CS2 series received FDA 510(k) clearance for use with the company's SeCore HLA typing kits.
