

Gross room lab tray, 8/16

August 2016—Safety-Spec, a pathologist-owned company, has announced that the Gross Room Lab Tray is available for order on its website, Safety-Spec.com. Designed by a pathologist and laboratory scientist, the tray provides improved specimen organization in the gross room queue, resulting in increased efficiency and patient safety by reducing the potential for misidentification of specimens from a patient (intra-accession mislabeling) as well as misidentification between patients (inter-accession mislabeling).

A single tray provides organization for up to four patient specimens with two blocks per specimen, as well as the accession paperwork. Available in multiple colors, the trays can be used for laboratory-specific organization, such as grossing stations or for various specimen types, helping to quickly identify similar specimen types that may be in the gross queue “back to back.”

The Gross Room Lab Tray is sold directly from the Safety-Spec website to keep prices lower. Safety-Spec is offering a deep discount on preproduction orders.
