

Hamilton Scientific products installation, 2/14

February 2014—Hamilton Scientific recently completed installation of 60 fume hoods and 120 laboratory benches in the 200,000-sq.-ft. lab space at the Wisconsin Energy Institute and Consolidated Forensic Lab. The laboratory workstation design was developed in response to the customer's request for ease of utility access while simultaneously allowing for movable laboratory benches.

Hamilton's adaptable workstations with lockable casters allow users to easily move the units wherever horizontal workspace is needed. The six-foot-wide movable workstations can support 1,200 pounds on the benchtops and are reinforced to accommodate heavy equipment, including analytical instrumentation and other lab equipment.
