

Hc1 partners with AON to develop Workforce Optimization

Aug. 2, 2023—[Hc1](#) announced a development partnership with [American Oncology Network](#). The collaboration will enable AON's cancer care team to optimize laboratory staffing through artificial intelligence and machine learning models trained on combined timekeeping and testing data using Hc1's Workforce Optimization solution. The partnership is underway with design input from AON to help create a proactive system that enables the visibility of key performance indicators.

"We know the tighter margins in health care due to labor shortages have created an urgent need to optimize staffing and expenses," Adam Sajewich, director of high value care at Hc1, said in a press release. "Our partnership with AON demonstrates their commitment to innovation and a data-driven solution. They are a key partner who will play an important role in the development and adoption of this new solution and how its predictive insights can help guide decision-making in real time."

Hc1 has slated testing and installation of the solution for this fall. The company will initially deploy the solution at AON's central lab in Ft. Myers, Fla. AON is a network of community-based oncology practices across the country.
