

Health Canada approves Allplex respiratory test, 5/15

May 2015—Seegene announced that Health Canada has approved its six-target Allplex Respiratory Panel 5 assay, which identifies influenza virus A and B, RSV A and B, and influenza A virus subtypes H1 and H3. Allplex tests are based on the company's MuDT technology enabling simultaneous detection and quantification of multiple targets in a single fluorescence channel, without melting curve analysis.
