

## Hemophilia genetics testing, 2/13:113

BloodCenter of Wisconsin's Diagnostic Laboratories has expanded its genetic testing menu for hemophilia. Its new approach to hemophilia genetics allows BloodCenter to identify the genetic abnormality in greater than 95 percent of all hemophilia patients.

The center's newly expanded hemophilia testing menu now offers genetic testing for mild, moderate, and severe hemophilia patients.

The expanded test availability allows physicians to prescribe the most cost-effective and appropriate treatment to the patient.
