

## IL launches GemWeb Plus 500, 9/17

**September 2017**—Instrumentation Laboratory launched its customized connectivity solution, GemWeb Plus 500. From its dashboard, GemWeb Plus 500 offers complete control of Gem Premier critical care testing systems, including Gem Premier 5000 with Intelligent Quality Management 2, as well as connectivity to non-IL-manufactured devices at the point of care. GemWeb Plus 500 is accessible from tablet devices, PCs, and any networked analyzer.

Integrating control of analyzers, test results, and operators into one system, GemWeb Plus 500 aims to simplify and centralize point-of-care testing management. Users can monitor iQM2 and iQM, including detection, correction, and documentation of corrective actions in real time. The system automates multilevel operator authorization and full traceability of users, actions, and competency certification. It supports integration with hospital information systems, laboratory information systems, and electronic medical records. Connectivity to Rotem, Hemochron, and other IL systems is in development.
