

Incubators, 9/13

Eppendorf North America offers a new generation of its ThermoMixer and ThermoStat incubators.

The excellent mixing results of the ThermoMixer C, F1.5 and FP (two-in-one instruments for combined mixing and incubating) are due to the company's two-dimensional mix-control technology, which ensures fast and efficient mixing in seconds. Through controlled circular movements, liquids in small volumes are thoroughly mixed, while anti-spill technology prevents lid wetting and cross-contamination.

For dry incubation, the company's ThermoMixer C and ThermoStat C operate together with SmartBlocks, which can be exchanged through QuickRelease technology. These individually sensor-controlled SmartBlocks help maintain accurate, uniform temperatures.

Eppendorf also offers its ThermoTop, which is a heated lid with Condens.Protect technology. The easy-to-use ThermoTop prevents condensation from forming on the tube lid and wall and supports temperature homogeneity of the thermoblocks to ensure excellent reaction conditions.
