

Inova Dx launches calprotectin extraction device

February 2019—Inova Diagnostics announced FDA clearance of its Fecal Extraction Device for use in conjunction with Quanta Flash Calprotectin, which aids in the diagnosis of inflammatory bowel disease and helps differentiate IBD from irritable bowel syndrome. The Fecal Extraction Device correlates well to the manual weighing method, allows extracted sample to be stored up to 72 hours at room temperature, and can be placed directly on the Bio-Flash system for sample processing.
